

DMS – Avocados

DMS provides a full range of services for avocado growers.

DMS avocado services:

- Orchard management and lease options
- Avogreen pest monitoring
- Maturity testing
- Picking and packing for export and local market
- Technical advice
- Outlet for processing fruit through Avocado Oil New Zealand Ltd

DMS has strong relationships with both its exporter and local marketer, resulting in excellent returns for growers. We work closely with both of these parties to harvest in accordance with market demand to maximise grower profit.

As with kiwifruit, we are proud of the results we achieve on managed and leased orchards. Our plans are flexible so as to meet the needs of different growers. Production in excess of industry average is regularly achieved on these orchards.

Avocados are packed at the DMS Te Puna site which features a modern grader that incorporates soft fruit handling systems. The fruit is washed with a waterblaster to reduce pest risk in export crops and to maximize packouts.
